About Me

Results-driven Machine Learning Engineer with a diverse skill set and a passion for innovation and problem solving. Experienced in delivering robust solutions, optimizing software performance, and thriving in fast-paced environments. Nerds out on MCU and Power Rangers trivia.

Work Experience

Greet Labs, Bangalore

MACHINE LEARNING ENGINEER

Dec. 2022 - Present

- Designed, developed, and deployed machine learning models to enhance platform intelligence and automation capabilities.
- Built end-to-end ML pipelines including data collection, preprocessing, feature engineering, model training, and evaluation.
- Applied scikit-learn, TensorFlow, Keras, and PyTorch to develop and optimize predictive and analytical models.
- Improved model accuracy and reliability through systematic experimentation, hyperparameter tuning, and validation techniques.
- Worked with large, structured datasets using Pandas, NumPy, and SciPy to extract actionable insights.
- Implemented computer vision solutions using OpenCV where applicable to automate visual data analysis.
- Collaborated closely with product managers and backend engineers to integrate ML models into production SaaS workflows.
- Documented model assumptions, performance metrics, and limitations to support maintainability and scalability.
- Tools and Technologies used: TensorFlow, Keras, PyTorch, scikit-learn, Pandas.

IMPACT

- Contributed to measurable improvements in platform efficiency and decision-making through ML-driven features.
- Reduced manual effort by automating data-driven processes using predictive models.
- Successfully transitioned experimental models into production-ready solutions.

Greet Labs, Bangalore

PYTHON DEVELOPER

Jun. 2021 - Aug. 2023

- Proficiently harnessed the power of the Pandas library to extract, clean, and manipulate pharmaceutical data. This process involved several crucial steps to ensure the accuracy and reliability of the information we worked with.
- Undertook the challenge of building sophisticated machine learning models to predict the risk compliance of patients. This involved a comprehensive and systematic approach that incorporated various stages of model development and validation.
- Translating legacy code from SAS to Python involves converting existing code written in the SAS programming language into Python code. This process requires a thorough understanding of both programming languages, data processing concepts, and the specific logic embedded in the legacy SAS code.
- Collaborated with Product Managers, Design, and Customer Support teams to proactively deliver features and address customer pain points.
- Tools and Technologies used: Python, MySQL, Pandas, Flask.

Projects

ML-Driven SaaS Feature Optimization

BACKEND APPLICATION

Python, Scikit-learn

- Developed predictive models to analyze user behavior and optimize SaaS platform performance.
- Leveraged Python, Pandas, and scikit-learn for data processing and modeling.

Predicting Bangalore Housing Prices

BACKEND APPLICATION

- Designed an end-to-end machine learning pipeline to predict housing prices using Bangalore real estate data.
- Performed extensive data cleaning, handling missing values and outliers to improve dataset quality.
- Applied regression algorithms and optimized model performance through feature engineering and hyperparameter tuning.
- Evaluated models using appropriate metrics (e.g., RMSE) and visualized insights for interpretability.
- Demonstrated practical application of ML concepts to a real-world pricing problem.

Skills

LANGUAGES Python (Expert), Javascript
FRAMEWORKS PyTorch, TensorFlow, scikit-learn, Next.js
DATA SCIENCE NumPy, Pandas, Matplotlib.

Education

A.M.C. Engineering College, Bangalore

MASTER OF COMPUTER APPLICATIONS

Karnataka, India

- Class : First Class

Administrative Management College, Bangalore

BACHELOR OF COMPUTER APPLICATIONS

Karnataka, India
