About Me

Data Scientist with 3+ years of experience at the intersection of AI research and production engineering. Expert in building end-to-end AI applications that solve real-world challenges.

Work Experience

Greet Labs Pvt Ltd

DATA SCIENTIST

Bangalore, India

Jan. 2023 - Present

- **Developed and deployed an end-to-end RAG-based Generative AI system** using Azure OpenAI, LangChain, and Vector Databases, reducing information retrieval time for internal stakeholders by 40%.
- **Engineered scalable forecasting and predictive models** on Azure to drive business decision-making, improving accuracy by 50% over baseline legacy methods.
- **Architected automated data visualization dashboards** that translated complex AI insights into actionable strategies for senior leadership and cross-functional teams.
- **Built and maintained production-level MLOps pipelines** on Azure, ensuring 99.9% uptime for deployed AI services and seamless model retraining.

AI & MACHINE LEARNING ENGINEER ENGINEER

Dec. 2022 - 2023

- **Designed a high-precision Computer Vision system** using YOLOv5 for automated Pest & Disease Detection, achieving a 60% mAP (mean Average Precision) on diverse field datasets.
- **Implemented Super-Resolution GANs (ESRGAN)** to enhance satellite imagery, increasing spatial resolution and feature extraction capabilities for geospatial analysis.
- **Developed and containerized LLM-powered REST APIs** using FastAPI, Docker, and TorchServe, streamlining the deployment of RAG systems into existing enterprise workflows.
- **Optimized deep learning inference pipelines**, reducing latency by 0.82 to 0.91 ms for real-time production applications through model quantization and efficient API design.

Projects

Real-Time Sentiment Analysis Engine (NLP)

AI APPLICATION

Python, FastAPI

- Engineered a real-time sentiment analysis tool using **BERT** and **Flask** to monitor social media mentions.
- Achieved an **88% F1-score** on multi-class classification, allowing the PR team to respond to negative trends 3x faster than previous manual methods.
- Reduced manual AI workflow setup time by automating agent configuration using LLM-driven logic.

Online Banking

BACKEND APPLICATION

Python, Flask

- Uses Python and MySQL - Transaction Management, Loans, Cheque, Fund Transfers.
- All forms validated on Client Side using JS and on Server Side using Python.
- Project Link - <https://github.com/meashish194/OnlineBankingPython>

Skills

Programming Languages

Python (Expert), SQL, Bash, JavaScript

Data Architecture

SQL (Expert), Snowflake, MongoDB, Apache Spark, SQL Server, Data Pipelines

Engineering & Cloud

Azure, Docker, FastAPI, Flask, TorchServe, REST APIs, CI/CD for ML, MLflow

AI & ML Expertise

Generative AI (RAG, LLMs), Computer Vision (Object Detection, Super-Resolution), Predictive Analytics, MLOps

GenAI Stack

LangChain, Azure OpenAI, Vector Databases (Pinecone/Milvus), Prompt Engineering, LlamaIndex, Hugging Face

ML Frameworks

PyTorch, TensorFlow, Scikit-learn, YOLOv5/v8, ESRGAN, Pandas, NumPy, Keras

Education

A.M.C Engineering College, Bangalore

MASTER OF COMPUTER APPLICATION

Karnataka, India

- Class : First

Administrative Management College, Bangalore

BACHELOR OF COMPUTER APPLICATIONS

Bangalore, India

DAV PUB School, Bokaro

SENIOR SCHOOL

JH, India
