EDUCATION **Master of Computer Applications**
A.M.C Engineering College, Bangalore
• Class: **First Class**

EXPERIENCE **Senior Python Developer, Foster Technologies India Pvt. Ltd.** May, 2022 - Present

- Developed and consistently managed **Python-based software (Flask and Angular)** designed specifically for compression tasks within the swaps domain. This involved crafting efficient algorithms and processes to optimize data while adhering to industry standards. Additionally, the role included ongoing maintenance, debugging, and enhancement of the software to align with the dynamic requirements of the swaps market.
- Developed Python scripts to identify potential compression opportunities for **cross-currency** and **inflation trades**, enabling the bank to reduce notional value and risk exposure of financial transactions. This was achieved by applying complex derivatives logic to combine or net offsetting positions.
- Contributed to the development of incremental features within the **Angular** framework for the compression platform. Responsibilities included breaking down large functionalities into smaller, manageable components and implementing them iteratively, ensuring smooth integration of new capabilities into the existing system.

Python Developer, Foster Technologies India Pvt. Ltd.

- Proficiently harnessed the power of the **Pandas** library to extract, clean, and manipulate pharmaceutical data. This process involved several crucial steps to ensure the accuracy and reliability of the data.
- Undertook the challenge of building sophisticated **machine learning models** to predict the risk compliance of patients. This involved a comprehensive and systematic approach, incorporating multiple stages of model development, evaluation, and validation.
- Translated legacy code from **SAS** into **Python** by converting existing SAS programs into efficient Python scripts. This required a deep understanding of both programming languages, data processing concepts, and the business logic embedded in the legacy SAS code.

Intern

Robotic Process Automation (RPA) portal: Designed and implemented a centralized portal using Java and Angular to streamline the management and monitoring of all Robotic Process Automation (RPA) bots across the organization. This portal served as a powerful tool for gaining valuable insights into the performance and efficiency of each individual bot.

TECHNICAL SKILLS **Strongest Areas** - OOPS concepts, Data Structures
Languages - Python, Shell Script
Tools/Frameworks - Django, AWS, L^AT_EX, MySQL, Git

PROJECTS All projects available on git : <https://www.github.com/meashish194>

- **HEALTH CHECK**
Machine Learning Web Application that can predict three diseases i.e. Diabetes, Heart disease, and Cancer. The datasets have been taken from Kaggle. And overall analysis and model building for the diseases have been done in respective Jupyter Notebooks.
Tools: Gensim's Doc2Vec, t-SNE, MongoDB, SciPy's two-tailed hypothesis test
- **ONLINE BANKING**
Uses PHP and MySQL - Transaction Management, Loans, Cheque, Fund Transfers.
- **CHESS GAME** A GUI based Chess game in JAVA for two players that implements all major OOP Concepts. Techniques like backtracking and Greedy Approach was used to determine possible moves. Files were used for storing statistics.
